

**Carlyle Drilling**  
Water Well Specialists

30.11.16

Aquatronic Solutions [ATS] electro-seismic aquifer mapping technology.

Carlyle Drilling Ltd , 124 Te Puke Highway, RD7, TePuke, New Zealand is a third generation highly experienced water well drilling company. We operate in a lot of volcanic and trying geology types.

We are often drilling to 400m + depth agricultural, horticultural, irrigation and community water wells.

Of late we have used the services of ATS to run their aquifer and geology mapping technology over some of our jobs in several different counties and districts prior to drilling the wells.

We have been most impressed with this technology and we are looking to use ATS on a permanent basis.

As Mr McKendry of ATS clearly points out to myself and my staff – “ no geophysical services are 100%” and we respect that but from our experience the technology has to date lined up very well with the actual drilling results over several wells.

From a drillers point of view and a property owners point of view we would certainly recommend consideration be given to appointing ATS to survey the area with this technology prior to drilling.

The combined set of information supplied by ATS is extremely valuable.

Sincerely

Mark Carlyle
